Bruce Williams - Doctor of Podiatric Medicine

Breakthrough Podiatry

Gait Analysis

Attacks

Your Pain Faster.

One Size Does NOT Fit All!

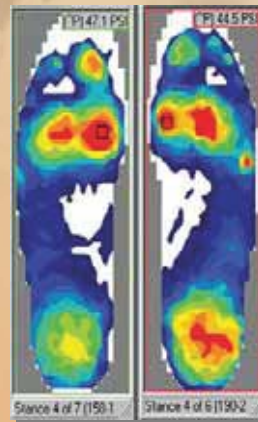

The average person takes thousands of steps each day, resulting in the placement of extremely high pressures on your feet. This can lead to biomechanical problems with lasting effects. On top of that, everybody is unique and has a different walking pattern, which creates the need for individual treatment. There is no “one size fits all” solution to foot problems.

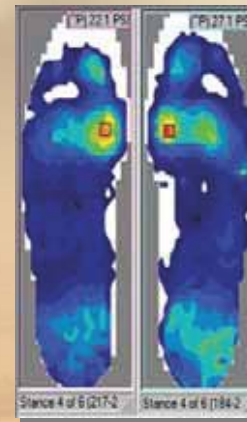

With foot pressure measurement technology, it is now easier than ever to fight your condition. Breakthrough Podiatry uses Gait Analysis technology to “see” inside your footwear and under your feet to evaluate your condition. Gait Analysis is fast, effective, and completely pain-free.

Before Treatment

After Treatment

Attacks Your Hidden Problems

This technology reveals a host of various conditions that cannot be seen otherwise and is a valuable tool to assess how effective your orthotics are, detect a limb length discrepancy, combat lower back pain, attack areas of potential ulceration for a diabetic, and even assess surgical procedures.

Gait is Dynamic

Assessing motion, and more specifically, how you walk, is important when prescribing the most effective treatment that will confront your pain. Gait is dynamic, and everything happens quickly. To attack your condition head-on, each movement needs to be captured from the second your heel hits the ground. Pressure mapping technology finds your pressure “hot spots” in each phase of motion from heel contact to toe off.

Breakthrough Podiatry gets you out of pain fast by prescribing effective treatments that fight abnormal pressure gradients. Breakthrough Podiatry has treated hundreds of patients who respect, like, and appreciate the powerful impact that Dr. Williams makes on their feet!
